ANNOUNCEMENT

The subject index to this issue of the Bibliography of Agriculture was prepared by permuting the subject entries originally assigned to each citation.

The purpose of permuting the entries was to obtain additional points of access to the information and to increase the specificity of information under each entry.

The above action is one more instance of the use of computers to increase the accessibility of information in the National Agricultural Library.

BIBLIOGRAPHY OF AGRICULTURE

Vol. 33

August 1969

No. 8

The Bibliography of Agriculture is an index to the literature of agriculture and the allied sciences received in the National Agricultural Library. Publications from any country are indexed, provided they are in one of the languages shown in CAPITALS at top of next column, or have summaries, abstracts, or translated titles in one of those languages.

Literature received more than one year after publication is generally not indexed. Exceptions are made for important scientific publications.

Indexing of articles on the processing of agricultural products is limited to those on primary processing.

Unsigned articles and those signed with pseudonyms or initials, editorials, letters to the editor, and columns appearing regularly, are omitted.

For more detailed coverage of the literature on pests and their control, please consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.

FORMAT

The Bibliography is a classified arrangement of references under the following subjects:

- USDA Publications
- State Agricultural Experiment Station Publications
- State Agricultural Extension Service Publications
- Agricultural Economics and Rural Sociology
- Agricultural Products
- Animal Industry
- Engineering
- Entomology
- Food and Human Nutrition
- Forestry
- Plant Science
- Soils and Fertilizers
- Miscellaneous

The classified section is followed by the listing of:

- New Periodicals and Serials
- Translations
- Food and Agriculture Organization of the United Nations (FAO) Publications

The last section of each monthly issue, except November, is the Author and Subject index for that issue.

For monographs the title is shown in the original language, followed by the English version. Titles of foreign language articles in serial publications are given in English only; the language of the text is shown in abbreviated form in parentheses at the end of the title. The following notations are used:

(Af)	Afrikaans	(Ic)	Icelandic
(Al)	Albanian	(In)	Indonesian
(Ara)	Arabic	(It)	ITALIAN
(Arm)	Armenian	(Ja)	JAPANESE
(Az)	Azerbaijani	(Ka)	Kazakh
(Be)	Belorussian	(Ko)	KOREAN
(Bu)	Bulgarian	(La)	Latvian
(Bur)	Burmese	(Li)	Lithuanian
(Ch)	CHINESE	(No)	Norwegian
(Cz)	CZECH	(Pe)	Persian
(Da)	Danish	(Pol)	POLISH
(Du)	DUTCH	(Por)	PORTUGUESE
(Es)	Estonian	(Rum)	Rumanian
(Fi)	Finnish	(Rus)	RUSSIAN
(Fl)	Flemish	(Se)	SERBO-CROATIAN
(Fr)	FRENCH	(Si)	Siamese
(Ge)	GERMAN	(Sl)	Slovenian
(Geo)	Georgian	(Sp)	SPANISH
(Gre)	GREEK	(Sw)	Swedish
(He)	Hebrew	(Ta)	Tadzhik
		(Tu)	TURKISH
(Hu)	HUNGARIAN	(Uk)	UKRAINIAN

Abbreviated names of the publications cited prior to July 1, 1964 are those from USDA Miscellaneous Publication 765—List of Serials Currently Received in the Library of the United States Department of Agriculture, July 1, 1957. Abbreviated names of all new periodical titles received after July 1, 1964, are taken from the American Standard for Periodical Title Abbreviations. As time allows, abbreviations set up for titles before that date will be converted to the new form.

The presence of the term "Ref." in the citation indicates that the article contains ten or more references to the literature.

Following each citation is the Library classification number which should be used when requesting loans or reproduction of articles.

FREQUENCY OF PUBLICATION

The Bibliography is published monthly. The December issue is devoted wholly to a subject index and the cumulated Personal and Organizational index to the preceding eleven issues.

AVAILABILITY OF REFERENCES CITED

Loans

Most of the material in the National Agricultural Library collection may be borrowed by employees of the Department of Agriculture and by other libraries. In requesting loans, please include the library call number found at the end of the citation. Loan of periodicals is restricted to the Washington, D. C. area. Foreign statistical publications and rare books are loaned only by special arrangement.

Free Distribution

U.S.D.A. publications. Domestic requests for publications of the United States Department of Agriculture will be filled free to libraries and other qualified agencies and organizations, as long as the supply lasts. (For ordering information, see Checklist of U.S.D.A. Publications in this issue.) Foreign institutions, organizations and agencies which issue publications may obtain U.S.D.A. publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Md., 20705.

State Agricultural Experiment Station and Extension Service publications. Publications issued by State Agricultural Experiment Stations and Extension Services are available except where noted, and as long as the supply lasts, from the issuing station or service. The National Agricultural Library does not distribute them; however, reproductions are available at regular Library rates.

Technical Reports

Most documents issued by CFSTI (Clearinghouse for Federal Scientific and Technical Information) are also sold by the Clearinghouse, U. S. Department of Commerce, Springfield, Virginia 22151 for \$3.00 per document.

Reproduction

All articles listed may be obtained in microfilm or photoprint form from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Md. 20705. Copying charges for each periodical or book are:

MICROFILMS: \$1.00 for each 30 pages or fraction copied from a single article or book.

PHOTOPRINTS: \$1.00 for each 4 pages or fraction copied from a single article or book.

RUSH SERVICE: Will be furnished upon payment of \$1.00 additional for each order.

Payment must accompany the order. Cash, Library coupons, check or money order drawn to the National Agricultural Library, U. S. D. A., are acceptable. Payment for orders originating outside of the United States should be made by international money order or draft on an American bank, or by UNESCO book coupons. Superintendent of Documents coupons and requests to furnish photocopy to be paid from Superintendent of Documents Deposit funds cannot be honored. Credit may be extended only to Government agencies and institutions. Billing address should be indicated.

Library Coupons

National Agricultural Library coupons, valued at \$1.00 each, may be purchased in any quantity.

PLEASE GIVE COMPLETE BIBLIOGRAPHIC INFORMATION (INCLUDING CALL NUMBER)
AS IT APPEARS IN THIS PUBLICATION FOR EACH ITEM REQUESTED.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., 20402
\$26.50 per year, domestic; \$33.25 per year, foreign. Single copies vary in price.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget (January 3, 1969).

CHECKLISTS

Checklists of publications of the U. S. D. A., State Agricultural Experiment Stations, and State Agricultural Extension Services are prepared for the convenience of those who wish to follow the literature from these sources. Most of these publications are included also in the classified section. All are indexed in the author and subject indexes. Abstracts are included with citations of U. S. D. A. publications, provided they are brief and are received with the original publication.

U. S. D. A. PUBLICATIONS

Publications in the various United States Department of Agriculture series are listed first, followed by publications issued by the various agencies within the Department, arranged alphabetically by name of agency.

Domestic requests for publications in the various Department series will be filled free to libraries and other qualified agencies and organizations upon application to the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, as long as the supply lasts. They may also be purchased from the Superintendent of Documents, Washington, D.C., 20250.

Domestic requests for most publications issued by the Department will be filled free by the issuing agency, as long as the supply lasts. Requests should be addressed to the United States Department of Agriculture, name of the specific issuing agency, Washington, D.C., 20250.

Foreign governments, institutions and agencies which issue publications, may obtain United States Department of Agriculture publications in exchange by writing to the United States Department of Agriculture, National Agricultural Library, Exchange Section, Beltsville, Md., 20705.

For further information about the availability of United States Department of Agriculture publications, consult U.S.D.A. List Number 11, List of Available Publications of the United States Department of Agriculture, obtainable from the United States Department of Agriculture, Office of Information, Washington, D.C., 20250, and for sale by the Superintendent of Documents, Washington, D.C., 20402.

SUITABILITY OF SEVERAL FUNGICIDES FOR
TREATING SOIL INFESTED WITH PHYTOPHTHORA
CACTORUM TO PREVENT CROWN ROT DISEASE OF
APPLE TREES. Plant Dis. Rep. 53(3):182-185. Mar.
1969. 1.9 P69P

Sodium p-(dimethylamino)benzenediazosulfonate (Dex.) and bis[1,2,2-trichloroethyl] sulfide (C-4497), both as 5% granules, sodium dinitro-o-cresol (DNOC) soluble powder and 1-chloro-2-nitropropane were effective in laboratory tests in killing mycelium of *Phytophthora cactorum* to a depth of several inches in sandy loam, silt loam, and muck soils when applied to the surface and watered with the equivalent of 3 acre-inches over a period of several hours. Dex. did not injure roots of young apple seedlings at the rates used. The other compounds were phytotoxic. P. cactorum was isolated from soil of some orchard sites that had been treated with Dex. and C-4497, but recoveries were significantly fewer than from control of DNOC-treated sites.

TRANSMISSION AND TRANSLLOCATION OF
RED CLOVER VEIN MOSAIC VIRUS IN CLOVER. Plant
Dis. Rep. 53(3):200-203. Ref. Mar. 1969. 1.9 P69P
Infection of 6-day-old seedlings of three red
clover varieties failed when unifoliate leaves were me-
chanically inoculated with red clover vein mosaic virus (RCVMV), but infection of 18-day-old and 40-day-old
plants succeeded; a few of the older plants escaped infec-
tion. When roots of seedling plants of red clover, alsike,
and sweet clover and *Gomphrena globosa* were soaked in
crude extract from clover plants infected with RCVMV,
the seedlings were generally stunted and the virus was
detected in the foliage of alsike and sweet clovers and in
G. globosa. RCVMV was not detected in plant parts not
inoculated until 10 days after inoculation of leaflets and
then it was first found in the roots. A few days later it
was detected in all parts of the plants.

EFFECTS OF FUNGICIDE DRENCHES ON ES-
TABLISHED POINSETTIA [EUPHORBIA PULCHERRIMA]
PLANTS. Plant Dis. Rep. 53(3):225-227. Mar. 1969.
1.9 P69P

Soil fungicides, recommended as soil drenches
to prevent or control root diseases of potted poinsettias,
were evaluated for possible phytotoxic effects. High and
low rates and single and repeated applications were com-
pared. No phytotoxic effects were observed on any plant
parts for any treatment. Root systems were more exten-
sive and disease-free when higher rates of fungicides
were used with repeated applications.

THE PREVALENCE OF CRAZY TOP OF CORN
IN 1968. Plant Dis. Rep. 53(4):246-250. Apr. 1969.
1.9 P69P

Crazy top of corn was unusually prevalent in
Indiana and some adjacent States in 1968. The excessive
rainfall during May saturated soils and provided a con-
dition favorable for infection by the parasite, *Sclerophthora*
macrospora. Corn planted after the rains subsided during
the last days of May and early June did not show evidence
of the disease.

Seeds from about 250 ears, collected from the
few infected plants that were not barren, were planted in
the greenhouse. Seedlings from about 30 percent of these
ears were infected with the fungus. Evidence for infection
was based on symptoms and the presence of the fungus
within the host tissues. Although seed transmission has
been demonstrated, its role in dissemination of the patho-
gen is concluded to be negligible.

Sporangia were not observed to develop under
field conditions, or on young plants kept in a moist cham-
ber in the greenhouse. Sections of leaves, from these
same plants, held in a saturated atmosphere in vials did
produce several successive crops of sporangia. Germina-
tion generally was by zoospore formation under the con-
ditions of the experiment (23°C), but a few germinated
directly by germ tube.

- 48161 Ullstrup, A. J.
"BUGGY-WHIP" OF CORN AND ITS RELATION
TO THE INCIDENCE OF COMMON SMUT. Plant Dis.
Rep. 53(4):250-252. Apr. 1969. 1.9 P69P

Ustilago zeae.
"Buggy-whip" or "onion-leaf" of corn was un-
usually prevalent in Indiana and Illinois in 1968. The
characteristic symptom is the fusion of the upper portion
of the plant into a tube enclosing upper leaves and the tas-
sel. Varying degrees of fusion were observed from a
slight amount to complete enclosure. The tube appears to
be composed of midrib tissue, thick and heavily lignified.
The incidence of common smut was much higher on
plants affected by buggy-whip than on those free from
symptoms. The incidence of buggy-whip ranged from a
trace to 95 percent in some fields. Grain yields were
appreciably reduced in fields where the prevalence of
buggy-whip was over 25 percent.

That buggy-whip is directly related to excessive
absorption of 2,4-D was indicated by the absence of the
condition in some fields where the herbicide was not ap-
plied. The abnormally wet period during most of May is
believed to be responsible for over-absorption of the her-
bicide. Corn planted after the wet period did not show
buggy-whip.

COMPARATIVE INTERACTIONS OF ERWINIA
CAROTOVORA AND ERWINIA AMYLOVORA WITH PEAR
AND POTATO TISSUES. Plant Dis. Rep. 53(4):255-256.
Apr. 1969. 1.9 P69P

Ethyl acetate extracts of leaves or stems of
"Bartlett" pear trees (*Pyrus communis*) inhibited growth
of *Erwinia carotovora* (L. R. Jones) Holland more than
growth of *E. amylovora* (Burrill) Winslow, et al. Ethyl
acetate extracts of leaves and petioles of potato plants
(*Solanum tuberosum*) inhibited growth of *E. amylovora*
more than growth of *E. carotovora*. Heavy suspensions of
E. carotovora injected into the soft stem tissue of budded
Bartlett pear trees in the greenhouse caused blackening of
the injected tissue. Similar blackening occurred in trees
injected with clear supernatant fluid from centrifuged
potato tissue rotted by *E. carotovora*. The blackened stem
tissue resembled that seen in fire blight, but the affected
area did not enlarge and the tissue did not ooze fluid.
The black tissue reaction was not produced in potato
plants, nor in pear trees injected with washed cells of *E.*
carotovora.

48165 Cox, R. S.

A FLOWER BLIGHT OF CHRYSANTHEMUM IN SOUTH FLORIDA. Plant Dis. Rep. 53(4):257-259. Apr. 1969. 1,9 P69P

A flower blight not previously described caused an estimated loss of half a million dollars to the chrysanthemum growers in the Stuart, Florida area. It was correlated with unusual weather resulting in senescent tissues in the composite flower. The disease caused a petal necrosis ultimately encompassing the entire flower head. Although causal relations were not established, several fungi (*Alternaria solani*, *A. tenuis*, and *Stemphylium* spp.) were associated. Tetrachloroisophthalonitrile and the fungicides provided control.

48166 Griffin, G. D., and Jorgenson, E. C.

LIFE CYCLE AND REPRODUCTION OF MELOIDOGYNE HAPLA ON POTATO. Plant Dis. Rep. 53(4):259-261. Apr. 1969. 1,9 P69P

The optimum temperature for reproduction of *Meloidogyne hapla* on "Russet Burbank" potato is 24°C. There was no reproduction at 15 and 35°, and reproduction was partially inhibited at 20 and 30°. Viable eggs were first observed after 6 weeks at 30°. The life cycle of *M. hapla* at 25° was approximately 7 weeks, although second-stage larvae from the second generation were not recovered from the soil until 10 weeks after inoculation.

48167 Brigham, R. D., and Minton, E. B.

RESISTANCE OF DWARF-INTERNODE CASTOR (*RICINUS COMMUNIS*) TO VERTICILLIUM WILT. Plant Dis. Rep. 53(4):262-266. Apr. 1969. 1,9 P69P

Dwarf-internode castor (*Ricinus communis*) plants from 16 selections were tolerant to *Verticillium albo-atrum* Reinke & Berth. in naturally infested field soils at Lubbock, Texas while cotton was extensively damaged. When 32 castor selections were grown on artificially infested field soils, leaf and vascular symptoms were not observed, and the fungus was not isolated from leaf petioles or stems. In the first of two greenhouse experiments, 3 of 13 inoculated castor seedlings showed chlorotic cotyledons; the fungus was cultured from 2. Similarly inoculated cotton seedlings were defoliated or dead in 35 days. Inoculated castor plants in the second experiment did not show foliar symptoms. The fungus was cultured from several roots and a single leaf and stem from stems. In view of the field observations, low percentage of recovery from plant parts, and the lack of definite foliar and vascular symptoms, the selections of castor tested are apparently highly tolerant to strains of the pathogen virulent on cotton.

48168 Singh, A. B.

A NEW VIRUS DISEASE OF CARICA PAPAYA IN INDIA. Plant Dis. Rep. 53(4):267-269. Apr. 1969. 1,9 P69P

Symptomatology, host range, physical properties, and insect transmission of papaya leaf reduction virus (PLRV) have been studied. Papaya plants infected with PLRV have greatly reduced thread-like leaves at the top. Infected plants are stunted and latex flow is reduced. The virus is restricted to *Carica papaya*, is transmitted by sap and by the aphid *Myzus persicae* (Sulzer), and is nonpersistent. PLRV remained active up to a dilution of 1:100 and was inactivated on exposure to 50°C for 10 minutes. In crude juice it remained active for 3, but not for 4, days. PLRV is different from all papaya viruses so far reported.

48169 Miller, D. R., and Swain, K. M.

RHABDOCLINE [PSEUDOTSUGAE] NEEDLE CAST FOUND ON BIGGONE DOUGLAS-FIR [PSEUDOTSUGA MACROCARPA]. Plant Dis. Rep. 53(4):270. Apr. 1969. 1,9 P69P

In February 1968 Rhabdocline needle cast was found, for the first time, infecting needles of biggone Douglas-fir in southern California.

48170 Schroeder, W. T., and Providenti, R.

RESISTANCE TO BENOMYL [FUNGICIDE 1991] IN POWDERY MILDEW OF CUCURBITS. Plant Dis. Rep. 53(4):271-275. Apr. 1969. 1,9 P69P

Isolated single colonies of cucurbit powdery mildew, presumably incited by *Sphaerotheca fuliginea* (Schlecht.) Poll., produced on leaves of plants grown in soil drenched with 25 mg of actual benomyl were demonstrated to be forms of the fungus resistant to the systemic action of the fungicide. Limited surveys among field-grown cucurbits indicated probable natural occurrence of benomyl-resistant mildew. In a selection of cucumber with field tolerance to powdery mildew, a benomyl-resistant form of the fungus developed profusely on the leaves of plants treated with benomyl, but only sparingly on leaves of nontreated plants, suggesting the possibilities

cont. next col.

that the fungus was becoming dependent upon benomyl, or that benomyl was interfering with the expression of inherent tolerance within the host.

48171 Jones, J. P., and Woltz, S. S.

FUSARIUM [XYSPORIUM LYCOPERSICI] WILT (RACE 2) OF TOMATO: CALCIUM, pH, AND MICRONUTRIENT EFFECTS ON DISEASE DEVELOPMENT. Plant Dis. Rep. 53(4):276-279. Apr. 1969. 1,9 P69P

Leon fine sand, with a pH of 4.4 and 4.5, was amended with hydrated lime, gypsum, sodium hydroxide, a complete micronutrient solution, and a complete micronutrient solution minus zinc in two greenhouse pot experiments. The addition of hydrated lime greatly decreased the incidence and severity of Fusarium wilt (race 2) to tomato. Gypsum and sodium hydroxide slightly reduced the incidence and severity of the disease. The complete micronutrient minus Zn soil amendment and the lack of a micronutrient amendment tended to decrease incidence and severity of wilt but the results were inconclusive. The possibility is discussed that the control of wilt by hydrated lime was due to a deficiency of micronutrients created by the increase in the pH of the soil solution and to an increased supply of Ca.

48172 Hunter, J. E., Buddenhagen, I. W., and Kojima, E. S.

EFFICACY OF FUNGICIDES, HOT WATER AND GAMMA-IRRADIATION FOR CONTROL OF POSTHARVEST FRUIT ROTS OF PAPAYA. Plant Dis. Rep. 53(4):279-284. Apr. 1969. 1,9 P69P

Incidence of postharvest fruit rots of papaya was reduced approximately 50 percent by 2-minute dips in a 2-aminobutane carbonated solution (1 percent active material) at 40°C, pH 10.5; or by fumigating with 2-aminobutane for 2 hours at 300 ppm. Higher rates resulted in better control but fruits failed to degreen evenly. Significantly better control was obtained by submerging fruits in water at 118-120°F for 20 minutes. Similar water treatment at 114-116°F failed to control rots. Gamma-irradiation treatment (75-100 krad), alone or in combination with hot water or 2-aminobutane, effectively extended fruit shelf-life but had limited fungistatic effect. Higher levels of irradiation were injurious to fruits. Rhizopus fruit rot was controlled with 2,6-dichloro-4-nitroaniline dips at 1000-2000 ppm.

48173 Latch, G. C. M.

CHEMOTHERAPY OF HEAD SMUT (USTILAGO BULLATA) IN BROMUS WILLDENOWII. Plant Dis. Rep. 53(4):284-286. Apr. 1969. 1,9 P69P

Fungicide 1991. Healthy seed was obtained from a mature Bromus willdenowii plant infected with head smut (*Ustilago bullata*) by treating clones with the systemic fungicides 2,3-dihydro-5-carboxanilido-6-methyl-1,4-oxathin-4,4-dioxide (DCMOD), 2,3-dihydro-5-carboxanilido-6-methyl-1,4-oxathin (DCMO), or benomyl.

48174 Halisky, P. M., Funk, C. R., and Babinski, P. L.

CHEMICAL CONTROL OF STRIPE SMUT IN "MERION" KENTUCKY BLUEGRASS [POA PRATENSIS]. Plant Dis. Rep. 53(4):286-288. Apr. 1969. 1,9 P69P

Evaluation trials were conducted with benomyl, PCNB, and B-33172 fungicides to determine their effectiveness against stripe smut (*Ustilago striiformis*). The chemicals were applied to replicated plots of heavily smutted "Merion" Kentucky bluegrass turf. The data show that the systemic fungicide, benomyl, was highly effective against this disease. PCNB also was effective; however, the formulation used in these tests imparted a yellow discoloration to the turf. B-33172, on the other hand, was generally ineffective for control of stripe smut.

48175 Skilling, D. D.

THE EFFECT OF TEMPERATURE ON ASCOSPORE RELEASE BY SCLERODERRIS LAGERBERGII. Plant Dis. Rep. 53(4):289-291. Apr. 1969. 1,9 P69P

Ascospores of *Scleroderma lagerbergii* were discharged at temperatures ranging from 3-29°C, with maximum discharge occurring at 17°. At this temperature a major spore discharge started within 4 hours after the apothecia were moistened. In contrast, at 3° only one spore was released during the first 40 hours. Rainfall for longer than 4 hours at temperatures from 17-25° would result in major ascospore release. To protect pine nursery stock, a fungicide spray should be applied as soon as possible whenever these environmental conditions develop.

48176 Skilling, D. D.
SPORE DISPERSAL BY SCLERODERRIS LAGERBERGII UNDER NURSERY AND PLANTATION CONDITIONS. Plant Dis. Rep. 53(4):291-295. Ref. Apr. 1969. 1.9 P69P

Pinus banksiana.

During a 2-year study in a red pine plantation and a nursery in northern Michigan, ascospores of *Scleroderris lagerbergii* were collected from April 9 to October 14, with the major collection from May 15 to September 3. Spore discharge and recovery were closely related to rainfall. During 1967, over 96 percent of the spores were recovered within 24 hours after rain. No evidence of wind dissemination of conidia was found.

48177 Johnson, A. W.
CONTROL OF MELOIDOGYNE INCOGNITA ON CREEPING BUGLEWEED (AJUGA REPTANS) WITH NEMATOCIDAL DRENCHES. Plant Dis. Rep. 53(4):295-298. Apr. 1969. 1.9 P69P

One application of a mixture of methanesulfonic acid, 2,4-dichlorophenyl ester and 1,2-dibromo-3-chloropropane (SD 1897: a mixture of SD 7727 and DBCP) and 1, 2-dibromo-3-chloropropane (DBCP) controlled *Meloidogyne incognita* on three cultivars of creeping bugleweed for 5 months.

48178 Hodges, C. F.

CONTROL OF THE CITRUS NEMATODE, TYLENCHULUS SEMIPENETRANS, WITH 1,2-DIBROMO-3-CHLOROPROPANE IN TAIWAN. Plant Dis. Rep. 53(4):300-301. Apr. 1969. 1.9 P69P

An experiment for controlling the citrus nematode, *Tylenchulus semipenetrans* Cobb, on living citrus trees using 1,2-dibromo-3-chloropropane (DBCP) in aqueous emulsion has been conducted from October 1967 to October 1968 at the Yangmingshan Field Station, Taipei, Taiwan, China. Basin application of the chemical (1.47 kg active per liter) at rates of 6, 4, and 2 ml (8, 6, 9, and 2, 9 g active) per m² to the sandy loam soil in which the trees grew resulted in reduction in citrus nematode population of 97 percent, 92 percent, and 59 percent, respectively after 1 year. From an economic standpoint, application of emulsifiable DBCP to sandy loam soil at the rate of 5, 9 g per m² is considered effective for controlling the citrus nematode in Taiwan.

48180 Anderson, J. L., Wądłay, B. N., and Schaeffer, J. P.
PSEUDOMONAS SYRINGAE INFECTION OF SWEET CHERRY FRUIT IN UTAH. Plant Dis. Rep. 53(4):301-303. Apr. 1969. 1.9 P69P

Prior to 1967 *Pseudomonas syringae* had not been identified as a causal agent of stone fruit diseases in Utah. Twig and blossom blight in 1967 and fruit canker in 1968 were locally severe in northern Utah sweet cherry orchards. These disease outbreaks were correlated with unusually cool, wet weather during late spring.

LOW TEMPERATURE SPRAYS FOR DUTCH ELM DISEASE CONTROL. Plant Dis. Rep. 53(4):304-306. Apr. 1969. 1.9 P69P

Cold weather control of *Scolytus multistriatus* and *Hylurgopinus rufipes* that transmit *Ceratocystis ulmi* to *Ulmus americana*.

Methanol depressed the freezing point of emulsions of methoxychlor and water. The extent of freezing-point depression was proportional to the concentration of methanol in the water. Substantial residues of methoxychlor were detected on elm twigs 123 days after application of an emulsion containing 30 percent methanol with a mistblower at -7.77°C. Similar freezing-point depressions were achieved with DDT emulsions.

DISTRIBUTION AND HOST RANGE OF MAIZE DWARF MOSAIC VIRUS IN VIRGINIA. Plant Dis. Rep. 53(4):307-310, map. Ref. Apr. 1969. 1.9 P69P

Maize dwarf mosaic virus (MDMV) has been identified in 49 counties scattered across Virginia. We report five perennial grass species as new hosts for MDMV and nine previously untested species as nonhosts. Although other perennial species can be infected by the virus, epidemic proportions of the disease occur only if *Sorghum halepense* is present and infected with MDMV.

48185 Wicker, E. F.

SUSCEPTIBILITY OF COASTAL FORM AND CENTRAL MONTANA DOUGLAS-FIR [PSEUDOTSUGA MENZIESII] TO ARCEUTHOBium DOUGLASSII. Plant Dis. Rep. 53(4):311-314. Ref. Apr. 1969. 1.9 P69P

Coastal form Douglas-fir is susceptible to *Arceuthobium douglasii* Engelm. when growing in the greenhouse and at field locations in western Washington. Central Montana Douglas-fir is susceptible to the same dwarf mistletoe when growing under greenhouse conditions; susceptibility under field conditions was not tested. The nonoccurrence of *A. douglasii* on Douglas-fir in northwestern Oregon, western Washington, and central Montana is discussed.

48186 Holmes, J., and Rich, A. E.
THE CONTROL OF BLACK ROT CANKERS ON APPLE TREES IN NEW HAMPSHIRE. Plant Dis. Rep. 53(4):315-318. Ref. Apr. 1969. 1.9 P69P

A survey of cankered limbs in apple orchards in New Hampshire showed that in neglected orchards over two-thirds of the cankers were infected with *Physalospora obtusa*. Commercial orchards varied from a low incidence of infection to 33 percent of the cankers infected with *P. obtusa*. On 100 marked cankers *P. obtusa* was present on 82 percent of the cankers examined and was probably the cause of at least 33 percent of them. Phenylmercuric acetate was the most effective fungicide tested in laboratory experiments for the inhibition of the growth of *P. obtusa*. Field experiments also showed that this material reduced the elongation of cankers by 68 percent as compared with controls. The period of greatest canker elongation occurred from early July to the middle of August. This coincided with a very dry period, which suggests that moisture stress may contribute to increased canker growth. Phenylmercuric acetate should be evaluated further for control of black rot cankers.

VIRGINIA PINE [PINUS VIRGINIANA], A NEW HOST FOR CRONARTIUM COMANDRAE. Plant Dis. Rep. 53(4):320. Apr. 1969. 1.9 P69P

No natural comandra rust infections were found on native Virginia pine growing on the Cumberland Plateau in areas where the disease has caused extensive losses in young loblolly pine plantations. Young potted Virginia pine seedlings suffered approximately 25 percent infection, however, when exposed in the same area during the summer of 1967.

Farm debt continued to increase during 1968. The rise in farm mortgage debt was slightly more than for non-real estate debt. Adequate loans were available to operators of efficient, commercial size farms. Interest rates were higher in 1968 than in 1967 on both long-term and short-term loans. The values of farm assets and farmers' equities grew more than farm debt.

MOZAMBIQUE'S AGRICULTURAL ECONOMY
IN BRIEF. U. S. D. A. Econ. Res. Serv. ERS- Foreign
249,12 p.,map. Feb. 1969. A281.9 Ag83

Although Mozambique remains one of the least developed countries in Africa, it is currently experiencing considerable economic growth. Exports are increasing; the economic infrastructure is expanding with the building of new highways, railroads, and dams; and a manufacturing industry is being developed, primarily for processing agricultural products. Mozambique's location and relative underdevelopment account for the unique importance of transit shipments, migrant labor, and tourism to its economy. Although most of the population is engaged in subsistence agriculture, the majority of small farmers also grow or gather one or more cash crops. A large percentage of total agricultural production comes from European-owned plantations.

FOREST SERVICE

48301 Blew, J. O., and Davidson, H. L.
COMPARISON OF WOOD PRESERVATIVES IN MISSISSIPPI POST STUDY. U. S. Forest Serv. Res. Note FPL-01, 10 p. Mar. 1969. A99.9 F7634Un

Contains service life data on southern pine posts installed at Saucier, Mississippi, in 1949 and 1964 as part of a long-time preservative evaluation.

48302 Hann, R. A.
LONGITUDINAL SHRINKAGE IN SEVEN SPECIES OF WOOD. U. S. Forest Serv. Res. Note FPL-0203, 13 p. Ref. Feb. 1969. A99.9 F7634Un

Measurements were made of longitudinal shrinkage occurring in seven species of wood dried from a green condition to equilibrium at five relative humidities. The relationship of shrinkage to relative humidity and the within-board variability shrinkage of clear, straight-grained lumber are reported. Results of interest are the amount of longitudinal expansion that occurred during drying and the significant variability in longitudinal shrinkage and expansion within a board.

48303 Bjugstad, A. J., Murphy, D. A., and Crawford, H. S.
POOR RETURNS FROM OZARK WOODLAND GRAZING. U. S. Forest Serv. Res. Note NC-60, 2 p. 1968. A5D11.A33

Cattle.
Sixty-three percent of the area in Missouri's National Forests produces forage at the rate of about 50 pounds per acre per year. Forage production on the other 37 percent ranges from a low near 75 pounds per acre in the pine stands to a high of about 200 pounds in the red-cedar stands.

48304 Foltz, B. W., and Johnston, W. F.
GROSS BASAL AREA GROWTH OF NORTHERN WHITE-CEDAR [THUJA OCCIDENTALIS] IS INDEPENDENT OF STAND DENSITY OVER A WIDE RANGE. U. S. Forest Serv. Res. Note NC-61, 4 p. 1968. A5D11.A33

A 20-year study in a Wisconsin swamp station of northern white-cedar indicates that after a second thinning gross basal area growth is independent of stand densities ranging from 90 to 225 square feet of basal area per acre. Mortality, net growth, and ingrowth were also independent of density in the thinned plots.

48305 King, J. P., and Nienstaedt, H.
EARLY GROWTH OF EASTERN WHITE PINE SEED SOURCES IN THE LAKE STATES. U. S. Forest Serv. Res. Note NC-62, 4 p. 1968. A5D11.A33

In 5-year-old test plantations in Minnesota, Wisconsin, and Michigan, eastern white pine seedlings from seed sources that are fast-growing in one location are not necessarily fast-growing in other locations. Until more intensive studies of the Lake States seed sources can be made, foresters should confine collection of white pine seed to local stands.

48306 Schweitzer, D. L.
A COMPUTER PROGRAM TO EVALUATE TIMBER PRODUCTION INVESTMENTS UNDER UNCERTAINTY. U. S. Forest Serv. Res. Note NC-65, 3 p. 1968. A5D11.A33

A computer program has been written in Fortran IV to calculate probability distributions of present worth of investments in timber production. Inputs can include both point and probabilistic estimates of future costs, prices, and yields. Distributions of rates of return can also be constructed.

48307 Stearns, F. W., Schweitzer, D. L., and Creed, W. A.
DEER BROWSE PRODUCTION: RAPID SAMPLING AND COMPUTER-AIDED ANALYSIS. U. S. Forest Serv. Res. Note NC-66, 4 p. 1968. A5D11.A33

Describes field techniques by which winter deer-browse production can be sampled with reasonable accuracy and moderate effort; and presents a computer program which simplifies and expedites the tabulation of the browse data. The method will be useful to both land managers and scientists doing research on the habitat of the white-tailed deer.

48308 Hyvarinen, M. J.
USING D.B.H. AND BUTT LOG QUALITY TO ESTIMATE TREE YIELDS BY SAW LOG GRADE. U. S. Forest Serv. Res. Note NC-67, 2 p. 1968. A5D11.A33
Presents a shortcut method of predicting sugar maple tree yields by saw log grade from d.b.h. and butt log grade.

48309 Echelberger, H. E., and Shafer, E. L.
SOME MANAGERS' VIEWPOINTS ON CAMPERS AND CAMPGROUND OPERATION. U. S. Forest Serv. Res. Note NE-88, 6 p. 1968. A99.9 F7622U
Nine managers of public campgrounds comment on their relations with their campers and some of the management problems they have. Topics include camping fees, reactions to survey interviews, registration procedures, campers' pets, and maintenance of facilities.

48310 Trimble, G. R.

FORM RECOVERY BY UNDERSTORY SUGAR MAPLE [ACER SACCHARUM] UNDER UNEVEN-AGED MANAGEMENT. U. S. Forest Serv. Res. Note NE-89, 8 p. 1968. A99.9 F7622U

A study of advanced sugar maple reproduction on a good site in West Virginia indicated that considerable improvement of stem form takes place after selection cutting in the overstory. The study stems were 1 to 6 inches in d.b.h. and many of them were over 50 years old. To an appreciable extent, flat tops and minor crooks were overcome after partial release.

48311 Plass, W. T.

TREE SURVIVAL AND GROWTH ON FESCUE-COVERED SPOIL BANKS. U. S. Forest Serv. Res. Note NE-90,4 p. 1968. A99.9 F7622U

In spoil-bank revegetation the emphasis today is on site protection. Quick cover crops overplanted to trees or shrubs are recommended on many sites. In this study we tried to determine how an established fescue cover affects tree survival and growth. We found the ground cover did not affect survival but did reduce the height growth of sycamore and sweetgum. It had little effect on growth of white pine and loblolly pine.

48312 Morrow, R. R., and Gibbs, C. B.

VACUUM PUMPING DOUBLES MAPLE SAP YIELD ON FLAT LAND. U. S. Forest Serv. Res. Note NE-91,5 p. 1969. A99.9 F7622U

Vacuum pumping more than doubled maple sap yield from tubing installations on nearly level land during the 1968 season. Increased yields were greatest when sap had to move slightly uphill.

48313 Martignoni, M. E., and Iwai, P. J.

DETERMINATION OF NUCLEOPOLYHEDRON COUNTS AND SIZE FREQUENCY DISTRIBUTIONS BY MEANS OF A COULTER TRANSDUCER. U. S. Forest Serv. Res. Note PNW-85,14 p. Aug. 1968. A99.9 F7625U

Used for inclusion bodies of polyhedrosis virus in *Homocampa pseudotsugata*. A Coulter counter, model B, with upper and lower threshold discriminators and a 30-micron aperture tube, can be used for the enumeration of nucleopolyhedra in suspensions—either pure or with varying amounts of impurities; also can establish size frequency distributions of viral inclusion bodies. Procedures are described in detail and illustrated.

48314 Reukema, D. L.

GROWTH RESPONSE OF 35-YEAR-OLD, SITE V DOUGLAS-FIR TO NITROGEN FERTILIZER. U. S. Forest Serv. Res. Note PNW-86,9 p. Aug. 1968. A99.9 F7625U

During the first 4 years following application, addition of 200 to 600 pounds of nitrogen per acre increased height increment 62 percent and d.b.h. increment 79 to 160 percent. Gross basal area increment was greater with heavier fertilizer applications, but severe snow-breakage was also increased. Thus, net production tended to be greatest with the addition of 200 pounds of nitrogen. Indications are that heavier application rates will have a longer lasting beneficial effect.

48315 Edgren, J. W.

POTENTIAL DAMAGE TO FOREST TREE SEED DURING PROCESSING, PROTECTIVE TREATMENT, AND DISSEMINATION. U. S. Forest Serv. Res. Note PNW-89,8 p. Sept. 1968. A99.9 F7625U

Seed is susceptible to damage each time it is handled. Damage may be inflicted during various steps in processing, treatment with chemicals, or dissemination by seeding devices. There is evidence that seed damage is cumulative. Thus, each new bump or treatment may bring the seed closer to death. Some present practices cause damage to seed, but the contribution to impaired germination from each possible source of damage is not known. Research is needed to develop the best possible methods for processing, treating, and disseminating valuable tree seed.

48316 Crouch, G. L., and Paulson, N. R.

EFFECTS OF PROTECTION FROM DEER ON SURVIVAL AND GROWTH OF DOUGLAS-FIR [PSEUDOTSUGA MENZIESII] SEEDLINGS. U. S. Forest Serv. Res. Note PNW-94,6 p. Nov. 1968. A99.9 F7625U

Protection from deer had little effect on survival of planted and natural Douglas-fir seedlings after eight growing seasons. Protected trees were slightly taller than unprotected trees. Trees from natural seedfall were taller than planted trees. Unprotected planted stock was shorter than its protected counterpart and showed no sign of "catching up." This difference should be of little consequence after a cutting cycle.

48317 Murray, J. R., and Countryman, C. M.

HEAT-RESISTANT ANEMOMETERS FOR FIRE RESEARCH. U. S. Forest Serv. Res. Note PSW-181,6 p. 1968. A99.9 F7652

Heat-resistant anemometers have been developed for measuring horizontal and vertical air flow in fire behavior studies. The anemometers will continue to provide data as long as the anemometer body is less than 650°F. They can survive brief immersion in flame without major damage. These air-flow sensors have aluminum bodies and rotor hubs and stainless steel cups or vanes supported by stainless steel tubing. The anemometers are suitable for use in normal situations as well as in high temperatures.

48319 Boe, K. N.

CONE PRODUCTION, SEED DISPERSAL, GERMINATION IN OLD-GROWTH REDWOOD CUT AND UNCUT STANDS. U. S. Forest Serv. Res. Note PSW-184, 7 p. map. 1968. A99.9 F7652

Records of 5 and 6 years' cone crops in old-growth redwood (*Sequoia sempervirens* [D. Don] Endl.) stands in northern California were studied for silvical facts. They show that (a) the principal trees in both cut and uncut stands bore fair to good cone crops for 5 consecutive years, (b) maximum seed dispersal of both total and sound seed occurred in winter, (c) overtopped trees under 30 inches d.b.h. produced almost no cones, and (d) about 86 percent of sound seed germinated, with most seed germinating in 12 days. The findings are applicable to redwood stands at medium to lower elevations.

48319 Myhre, R. J., and Croxton, R. J.

COLOR CONTACT PRINTS FROM 70-MM. COLOR FILM; PRODUCED BY SMALL PHOTO LAB. U. S. Forest Serv. Res. Note PSW-185,8 p. 1968. A99.9 F7652

Forest research.

Seventy-mm. color photography is gaining wider use as a technique in aerial sampling. To produce a large volume of color contact prints from 70-mm. stereograms, special darkroom equipment had to be built. But standard processing methods needed only slight changes. The procedures and equipment developed can be adapted easily to any photo lab at little expense. And the equipment can be used with other sizes of film and printing materials.

48320 Hirsch, S. N., and others.

PROJECT FIRE SCAN: FIRE MAPPING FINAL REPORT, APRIL 1962 TO DECEMBER 1966; THE USE AND SYSTEM REQUIREMENTS OF INFRARED SCANNERS IN MAPPING WILDFIRES. U. S. Forest Serv. Res. Paper INT-49,55 p., map. Ref. 1968. A99.9 F764U

R. L. Bjornsen, F. H. Madden, and R. A. Wilson, joint authors. An airborne infrared line scanner sensitive to the 3- to 5-micron spectral region mapped 38 forest fires during the 1963, 1964, and 1966 fire seasons. The imagery obtained provided information about the fire perimeter, relative intensity of burning areas, and spot fire location under conditions when smoke or darkness prevented visual reconnaissance. This report describes the operational methods and equipment used, and gives many examples of imagery collected. It discusses the radiometric and electronic characteristics peculiar to fire-mapping applications. A unique dual Polaroid recording camera was developed to provide quickly available imagery for airdrop to fire headquarters.

48321 Krebill, R. G.

COMANDRAE IN THE ROCKY MOUNTAIN STATES. U. S. Forest Serv. Res. Paper INT-50,28 p. Ref. 1968. A99.9 F764U

The development of comandrae blister rust of lodgepole pine is related to physical factors of the environment. After the rust has overwintered in pine stems, prevailing conditions of moisture and temperature often permit its spread and intensification on comandrae. Later in summer and early autumn, when pine-infecting inoculum is present, dry conditions and unfavorable temperatures limit infection of pines. Although destructive, outbreaks of comandrae blister rust are rare in pine stands in the Rocky Mountain States.

NATIONAL AGRICULTURAL LIBRARY

48322 Lotan, J. E.
CONE SEROTINY OF LODGEPOLE PINE
NEAR ISLAND PARK, IDAHO. U. S. Forest Serv. Res.
Paper INT-52,6 p.,map. Ref. 1968. A99.9 F7641
Stands of *Pinus contorta* Dougl. on adjacent
physiographic areas in southeastern Idaho vary in the
serotinous cone fruiting habit. On the Island Park Flat
(Average elevation 6,500 feet) 48 percent of the trees
were classified as predominantly serotinous cone trees
(bearing 90 percent or more serotinous cones). On the
nearby Moose Creek Plateau (average elevation 7,700
feet) only 23 percent of the trees were classified as
serotinous cone trees. The Island Park Flat produced
173,000 serotinous cones per acre, whereas the Moose
Creek Plateau produced only 53,000 such cones per acre.
Cone habit showed no relation to common plot and tree
parameters measured.

48323 Berg, W. A., and Vogel, W. G.
MANGANESE TOXICITY OF LEGUMES SEED-
ED IN KENTUCKY STRIP-MINE SPOILS. U. S. Forest
Serv. Res. Paper NE-119,12 p. 1968. A99.9 F7622Un
The occurrence of manganese toxicity was
studied on six legume species grown in 46 different acid
strip-mine spoils from Kentucky. This toxicity was
characterized by a distinct paling (chlorosis) on the leaf
margins that was readily seen on young leaves of all the
species except *Kobe lespedeza*. Spoil pH was useful in
predicting Mn toxicity on these legumes; water-soluble
Mn extracted from the spoils was not.

48324 Childs, T. W.
ELYTRODERMA DISEASE OF PONDEROSA
PINE [*Pinus ponderosa*] IN THE PACIFIC NORTH-
WEST. U. S. Forest Serv. Res. Paper PNW-69,45 p.
Ref. 1968. A99.9 F7625Un
The disease caused by *Elytroderma deformans*
intermittently results in severe local damage. Based on
field studies since 1949, disease symptoms, vegetative
spread within the host, behavior in sapling stands, and
damage to old growth are discussed. Guidelines are
given to minimize damage in young stands and to manage
mature stands. Despite its alarming appearance, the dis-
ease does not threaten the future of ponderosa pine.

ALASKA CEDAR; A BIBLIOGRAPHY WITH
ABSTRACTS. U. S. Forest Serv. Res. Paper PNW-73,
47 p. 1969. A99.9 F7625Un
This bibliography contains references to North
American and European literature containing informa-
tion on Alaska-cedar (*Chamaecyparis nootkatensis*
(D. Don) Spach).

48326 Mann, C. N.
MECHANICS OF RUNNING SKYLINES. U. S.
Forest Serv. Res. Paper PNW-75,11 p. 1969.
A99.9 F7625Un
Logs.

Presents a general description of running sky-
line systems and easy-to-use procedures for determining
the payload capability of any configuration. Intended pri-
marily as a practical tool for those who plan running sky-
line operations. Included is a mathematical derivation of
the procedures as presented on the worksheets for those
interested in a full understanding of the mechanics of
running skylines.

LINNEANA IN THE COLLECTION OF THE NA-
TIONAL AGRICULTURAL LIBRARY. U. S. Natl. Agr.
Libr. Libr. List 89,43 p. 1968. 1.916 L612
Although the National Agricultural Library is
basically a "working library," its collection also includes
many rare and unusual publications. This bibliography,
the second in the historic book series, lists monographs
which were written by or about the eminent botanist, Carl
von Linne.

The citations, arranged according to year of
publication, date from 1735 to the present. The National
Agricultural Library call number and the Library of Con-
gress card number (when available) have been included in
the citation.

operation with New York (State) Department of Agricul-
ture and Markets.

STATE AGRICULTURAL EXPERIMENT STATION PUBLICATIONS

Publications issued by the State Agricultural Experiment Stations are usually available from the issuing experiment station, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular Library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Md. 20705

Alabama Agricultural Experiment Station, Auburn

48342 Massingill, S. C., and White, M.
COMPARISON OF SEASONAL PRICE VARIATIONS OF SELECTED ALABAMA FARM COMMODITIES; FIVE- AND TEN-YEAR BASE PERIODS, Ala. Agr. Exp. Sta. Bull. 385, 46 p. Nov. 1968. 100 ALIS

48343 Ware, L. M., and Johnson, W. A.
POULTRY MANURE FOR VEGETABLE CROPS, EFFECTS AND VALUE. Ala. Agr. Exp. Sta. Bull. 386, 31 p. Dec. 1968. 100 ALIS

48344 Sturkie, D. G., Brown, V. L., and Watson, W. J.
BAMBOO GROWING IN ALABAMA. Ala. Agr. Exp. Sta. Bull. 387, 30 p. Ref. Dec. 1968. 100 ALIS

48345 Alabama Agricultural Experiment Station.
INDEX TO PROCEEDINGS OF THE ANNUAL CONVENTIONS FOR THE GEORGIA-FLORIDA PECAN GROWERS ASSOCIATION, NUMBERS 15-27, 1907-1933; AND FOR THE SOUTHEASTERN PECAN GROWERS ASSOCIATION, NUMBERS 28-59, 1934-1966, PREPARED BY L. M. WATE. Ala. Agr. Exp. Sta. Circ. 164, 46 p. Dec. 1968. 100 ALIS

48346 Rollo, C. A., Grub, W., and Howes, J. R.
AIR FLOW THROUGH POROUS CURTAIN WALL MATERIALS. Ala. Agr. Exp. Sta. Progr. Rep. Ser. 90, 3 p. Nov. 1968. 100 ALIM
Poultry housing.

ENTOMOLOGY

Contains references chiefly on general entomology, and taxonomic and geographic entomology. Some references on pests of crops and products are included in the Bibliography, but for more detailed coverage of the literature on pests and their control, consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.
